SUMMARY

Product Manager with a strong technical foundation and deep expertise in building AI-driven solutions. Formally certified as a Claude Certified Architect. I bring structure to complex problems, working closely with engineering to build scalable products and with design to craft intuitive, user-centered experiences. I care about products that not only solve real needs but are well built – for the people using them and the people building them.

EXPERIENCE

EPAM

Senior Product Manager Jun 2021 — Current

AI portfolio:

- Led the development of a conversational product knowledge assistant MVP for a major automotive company. The unified conversational interface allows sales and support teams to instantly access and synthesize information from thousands of documents across multiple source systems, significantly enhancing daily task completion and cross-functional support.
- Developed and implemented a framework for evaluating the capabilities and performance of a conversational AI product.

Outcome: Project is currently in UAT. Initial testing suggests a 25% reduction in support case handling time, a 30% increase in sales deal closure rate across the company's product portfolio, and approximately 15 hours per week reclaimed per salesperson due to increased operational efficiency.

SRE and Infrastructure portfolio:

- Led the design and implementation of Steel Threads observability methodology for a major automotive company.
- Established an end-to-end framework for measuring customer journey health across disparate data sources.
- Designed and facilitated structured, multi-day workshops to operationalize the Steel Threads methodology with cross-functional stakeholders
- Mapped customer journeys into discrete ownable checkpoints, and defined SLOs, degradation criteria, and a configurable dashboard-as-code template surfacing journey health and checkpoint status.
- Identified and documented a critical observability gap and designed a proxy/aggregate-based SLO approach to deliver measurable journey insight despite incomplete session stitching.
- Codified lessons from the POC into a reusable, 10-phase Steel Threads Methodology Playbook
- Pioneering an agentic AI approach within the Steel Threads program, using AI agents to automate journey and checkpoint identification, instrumentation planning, workshop preparation and facilitation, and analytics generation across each new implementation.

Outcome: The project is out of POC and is being scaled to additional customer journeys across the organization. Product stakeholders can connect individual service degradation to overall customer journey health, shortening root-cause investigation time and enabling clear, blame-free ownership attribution across teams.

API and Developer Experience portfolio:

- Built an API Documentation Portal for external developers for a major telecommunications provider.
- Redesigned the internal guidelines and recommendations for the API Documentation Maturity Model.
- Built synthetic developer profiles and an AI agent for documentation evaluation.

Outcome: Better internal and external API discoverability, improved quality of API documentation, streamlined review and promotion of internal API documentation to the external Partners portal

Service Management portfolio:

- Executed global compliance initiatives across the regulated markets portfolio for a major ITSM provider.

- Ran cost-benefit analysis to identify and prioritize the initiatives and oversaw their execution from high-level stakeholder communication to technical implementation.

Outcome: BC FIPS compliance across the regulated markets portfolio, sanctions compliance across the regulated markets portfolio.

Healthcare and MedTech portfolio: Built a fleet management portal for a multinational healthcare company.

- Organized the discovery results into initial requirements and built a short-term roadmap.
- In collaboration with design, created new UX workflows for the customer journey spanning multiple products.
- Continuously involved in discovery activities (surveys, user interviews, user testing, etc.)
- Integrated portal into the client's global healthcare platform.
- Managed integrations with existing internal products.
- Managed stakeholders across multiple business functions.
- Enabled knowledge sharing and facilitated collaboration between the client's internal departments (digital surgery platform, medical devices (hardware), manufacturing, regulatory, security, legal, customer service, etc.) and large cross-functional teams.
- Ensured global compliance while managing the cross-product release schedule

Outcome: projected savings of $8-10M in the first year from switching clients to a self-service portal and optimizing logistical workflows

Fintech portfolio: Led the EPAM product team on a project for a major global financial company.

- Launched multiple initiatives across the entire client's product portfolio (consumer-facing, partner-facing, internal systems, 3rd party integrations, etc).
- Implemented new KYC workflow for B2B2C portal
- Helped client launch a new line of products: led product workshops at project kickstart - goal alignment, user journey mapping; defined product metrics.

Outcome: 40% decreased load on call centers, 35% decrease in operational costs, 70% reduction in fraudulent applications, NACHA and CFPB compliance across the entire portfolio of financial services products

Public Speaking: Presented a product vision workshop at the EPAM internal product conference.

Modus Create

Product Strategist Dec 2020 — Jun 2021

- Worked with clients to align them on business goals, define KPIs, and build a strategic path to a successful product.
- Led product workshops to define a validated product offering aligned with the client's business goals and build a strategic product roadmap.
- Redesigned Product Kickstart – a series of strategic workshops to bring a product from idea to MVP.
- Led a masterclass on bringing products from idea to MVP to the DC entrepreneurial community.

Vingis

Product Manager Jan 2016 — Dec 2020

Helping companies, small and large, build great products in an agile manner. I build roadmaps, run user research, do requirements engineering, stakeholder management, and cross-functional team leadership. Among my clients were corporations such as PwC and startups in stealth mode.

Cardstack, New York, NY

Product Manager Mar 2018 — Apr 2020

Defined functionality and user experience of low-code/no-code app building platform (user-facing) and accompanying web framework (developer-facing). Coordinated a distributed development team.

- Launched a platform for contributor vetting (KYC) and Token Generation Event (ICO) based on the framework above. The company's own Token Generation Event was performed on that platform.
- Launched a pilot project for a decentralized artists' data management platform with Warner Music.
- Designed workflows for the next stage of the artists' data management project based on the no-code platform.
- Developed workflows and UX for a decentralized cross-company rewards management system for the travel industry.
- Launched Tally payment protocol in testnet, complete with accompanying web app.
- Launched multiple internal UX experiments

PwC and Google for Work, New York, NY

Product Manager Jun 2016 — May 2017

As a product manager at the product innovation lab co-sponsored by PwC and Google developed Field Service Optimization (FSO) solution from a pilot to a commercial product and implemented it with a leading Oil & Gas Service company in the US.

- Defined short and long-term roadmaps.
- Participated in user research and product discovery and integrated them into product requirements.
- Helped to build the data model for a new system and integration guidelines (using both SQL and NoSQL databases).
- Oversaw implementation with 6 external vendors (UI/UX, DevOps, AI/ML, development) and internal offshore development team serving as the main point of contact between teams.
- Launched web and mobile components of the FSO platform.

The product was a SaaS platform for managing all aspects of Field Services – from ticket lifecycle management to fleet, inventory, and schedule management to incentivization to reporting. It included web-based and mobile workplaces, integration with customers' datastore, and ERP (Microsoft Dynamics GP, Salesforce).

- The system will save an estimated $1.4M annually in parts costs by application of machine learning to predict the need for service/maintenance and maintain inventory levels.
- Time from job completion to customer billing decreased from months to days due to reduced paperwork.
- Decreased dispatcher time spent per ticket and increased user satisfaction thanks to ML-based assistant and user-centric UI.

REALPLACE, New York, NY

Co-founder and CTO Oct 2014 – Jun 2015

- Co-founded realplace, a startup aimed to enable a transparent commercial real estate buying and selling process.
- Performed product discovery, did customer research.
- Created product and technical requirements for the company's auctioning platform and built a prototype.

realplace was accepted into FirstGowthVC accelerator program.

ACISION (acquired Soli), New York, NY

Manager, Product Development Mar 2013 – Oct 2014

Managed a team of developers, a product manager, and a UX designer. Led product design and development, including:
- creating product requirements,
- building a roadmap,
- planning sprints,
- and being a technical point of contact for customers.

Products included a near-real-time reporting solution for mobile campaigns, a web UI for Smart SMS services, and an SMS solutions suite for small/medium businesses consisting of reminders, promotions, coupons, polls, and quizzes.
The largest client was America Movil, the 4th largest telecom in the world, and its subsidiaries: Telcel Mexico, Claro Peru, Claro Costa Rica, Claro Honduras, etc.

SOLI, New York, NY

Technical Product Manager Aug 2011 – Mar 2013

Was hired as the first technical employee in the US.
- Built a technical team in New York and was the main point of contact with the offshore team.
- Implemented agile practices in the product development cycle.
- Did feature discovery and created PRDs for the Soli self-service marketing platform.
- Created product requirements and led development of Proof of Concepts for Soli products, including SMS marketing solutions, mobile coupons, etc.
- Built an external API for the Soli mobile marketing platform, hosting campaigns for companies such as Coca-Cola and Procter & Gamble worldwide.
- Led the integration of the Soli platform with mobile operators and agencies for the Coca-Cola Olympics promotional campaign.

EARLIER EXPERIENCE: Various roles in software development

EDUCATION

Vilnius Gediminas Technical University, Vilnius, Lithuania
Master of Science in Management Information Systems
